## 11 In the Specification

12

Please delete the Paragraph beginning on Line 1, Page 2 and replace it with the following Paragraph

15

"Referring to Fig. 1, a diagram illustrating the 16 17 components of a digital camera 10, according to the prior art, is shown. The operation of the digital camera can be 18 understood as follows. A user activates switch 11 in order 19 20 to acquire a photographic image. The switch 11 applies an activation signal to processing unit 12. For a relatively 21 22 simple digital camera, the processing unit 12 will provide the proper conditions for photo-sensitive region 15 to 23 24 acquire an image, will activate the flash assembly 13, and will activate the shutter assembly 14. Activation of the 25 shutter assembly 14 will cause an optical image to be 26 applied to the photo-sensitive region 15. 27 The flash 28 assembly can be coordinated with the shutter assembly. After the image has been applied to the photo-sensitive 29

region 15, the image is converted into logic signals and is processed by the processing unit 12. In more complex 2 systems, the external illumination level can be monitored 3 and the processing unit 12 can control the time in which the photo sensitive region is illuminated by the subject. 5 The digital camera further includes a display 16 mounted on 6 a rotatable base 17. This display 16 is used to display an 7 8 image captured by the digital camera 10, the image being displayed in response to the to user input to the image After viewing, the user can then erase the 10 select 18. 11 image from the processing unit 12 or, if the image is acceptable, store the image in the memory 12A associated 12 with the processing unit 12 for later disposition. This 13 14 image acquisition technique in the prior art is a normal 15 mode of operation."

16

Please delete the Paragraph beginning on Line 25, page 5 and replace this paragraph with the following Paragraph.

19

"Referring to Fig. 2, a diagram of the digital camera" 20 In this 20 according to the present invention is shown. 21 embodiment of a digital camera, a sequence of images is 22 memory portion 12A associated 23 in a with the stored processing unit 12. The image sequence is applied to 24 25 display 16, display 16 being mounted on rotatable base 17. 26 Display 16 has been positioned to be facing the image subject(s) 21. 27 The sequence of images forms a count-down sequence that permits the image subject(s) 21 in an auto-28 activation mode to anticipate the moment of 29 exposure. The number of images in the image sequence and 30

1 the time between the images are selected to permit the image subject to estimate, at the end of the sequence, when 3 the shutter assembly 13, and if conditions require, the flash assembly 13 will be activated and the image of the 4 5 image subjects acquired. This display 16 is used to display 6 an image captured by the digital camera 10, the image being displayed in response to the to user input to the image 7 select 18. Depending on a user input, the image subject is 9 displayed, the sequence of image is displayed, or an image 10 can be immediately acquired." 11 12 Please add the following Paragraph after Line 11 of Page 6. 13 "The digital camera has a different mode operation, in 14 addition to the normal mode of operation activated by a 15 16 user input, wherein the shutter is activated immediately in 17 response to a different input by a user."
